

“TABIMORI –TRAVEL AMULET –” The App for Visitors to Japan New Upgrade with More Functions

Tokyo, 20 January 2015: Narita Airport's hospitality app, “TABIMORI” is getting a major upgrade!

The app was released in July last year to offer visitors to Japan a complete solution when they find themselves in trouble or they want to check or look something up, and has been very well received. We have now added a wider range of functions to make the app even more useful for travelers. The key features of this upgrade are as follows:

Feature 1

Transfer Guide *1 can be searched offline!

Visitors to Japan with difficulty in communication may now easily search for train connection information at any time from any location. The app will also now pinpoint the nearest station from the user's location using GPS.

*1 Average traveling times, number of transfers and fares will be displayed in Transfer Guide by simply entering departure and arrival stations in Japanese or English. Multiple possibilities are displayed to enable the user to select the optimum route. Users can search for connections online with a link to timetables.

Please note that users need to download station data for offline search.

Information source: HYPERDIA (Hitachi Systems Ltd.)

Feature 2

More contents for the life and culture section!

[Dining]

Menus that are particularly popular with overseas visitors will be added with photos. First-time visitors to Japan will no longer have difficulties in ordering and dining at restaurants in Japan.

[Transportation]

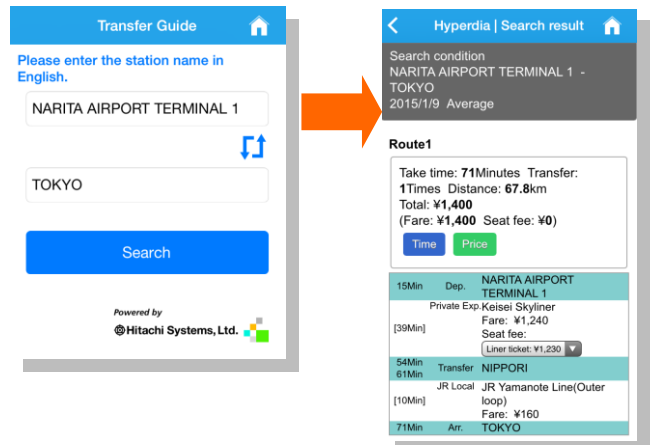

More information on how to use public transport. The information will enable first-time travelers to Japan to use trains, buses and taxis with confidence.

Take advantage of the new and improved “TABIMORI” app to enjoy your time in beautiful Japan!
