Narita International Airport Corporation

Radiation Readings at Narita International Airport

As a result of the Tohoku Pacific Ocean Earthquake on March 11th 2011, Narita International Airport Corporation (NAA) has been providing radiation readings from samplings conducted at the vicinity of the airport (Ichihara City in Chiba Prefecture, Hokota City and Tokai-mura in Ibaraki Prefecture) through NAA's Official Website, since the afternoon of the 19th.

Please be advised that in lieu of these samplings, NAA will now conduct samplings within the airport premises, twice a day (10:00 and 19:00) and will make those results of the radiation readings available on NAA's Official Website.
